Work history:

Modern School System

A system that helps schools to manage all school operations. The system helps parent to watch his child progress and they can contact his teacher easily. They can see their child results online. They can ask teacher or student affairs about any think through the system online instead of going to the school.

PHP Lovers project

PHP lovers is a project like a blog. You can create an account, share new post and submit a commit.

Shout it up Project

It is a small system like chat AJAX based.

Quizzer Project

Quizzer is a project with admin page for owner. He can add, edit and delete questions. For users they can test themselves according to correct answer. finally displays user's score.

Talking Space Project

It is a great project you can just add post or comments. admin has his own page which helps him to control the application.
